

Press Release

16th January 2018

BD Auto partnership with the Noise Abatement Society

BD Auto is an established manufacturer of electric Light Commercial & Passenger Vehicles and focuses purely on the “Electrification of Transportation” by offering 100% electric vehicles to its customers. With a state-of-the-art electric drive BD Auto models produce no CO₂ and no NO_x, are quiet when driving and silent at standstill. BD Auto vehicles have driven more than 20 million km in 8 European countries and customers include major delivery & logistics fleets such as Menzies Distribution, DHL, TNT, & Fedex as well as several large food retailers, utility companies, and local authorities.

With increasing population levels in cities the need for clean, quiet commercial vehicles to service the demands of the inhabitants has never been greater. In cities across Europe BD Auto electric vehicles are helping to improve air quality levels and reduce noise for the benefit of everyone. In this respect BD Auto is pleased to be working in partnership with the Noise Abatement Society to improve the environment whose objective is to raise awareness of, and find solutions to, noise pollution and pollutants related to solving noise issues, for example light disturbance and air pollution.

Noise Abatement Society’s work helps to relieve the physical and mental distress and ill health which noise and related pollutants cause and which profoundly affect public health, productivity, the quality of human and wildlife.

About Noise Abatement Society

The Society was established in 1959 by John Connell OBE who successfully lobbied the Noise Abatement Act through Parliament in 1960, establishing noise as a statutory nuisance for the first time in the UK.

The society is a leading authority and campaigner on all aspects of noise; consulted by, and working with government, industry and the public. It runs the UK’s only noise helpline offering free advice.
